## Downloaded from www.studiestoday.com RS Aggarwal Solutions Class 8 Mathematics Quadrilaterals

Answer:
(i) 4
(ii) 4
(iii) 4, co-linear
(iv) 2
(v) opposite
(vi) $360^{\circ}$

Q2.
Answer:
(i) There are four pairs of adjacent sides, namely $(A B, B C),(B C, C D),(C D, D A)$ and $(D A, A B)$.
(ii) There are two pairs of opposite sides, namely $(A B, D C)$ and $(A D, B C)$.
(iii) There are four pairs of adjacent angles, namely $\angle \mathrm{A}, \angle \mathrm{B}, \angle \mathrm{B}, \angle \mathrm{C}, \angle \mathrm{C}, \angle \mathrm{D}$ and $\angle \mathrm{D}, \angle \mathrm{A}$.
(iv) There are two pairs of opposite angles, namely $\angle \mathrm{A}, \angle \mathrm{C}$ and $\angle \mathrm{B}, \angle \mathrm{D}$.
(v) There are two diagonals, namely $A C$ and $B D$

Q3.

Let $A B C D$ be a quadrilateral.
Join $A$ and $C$.

Now, we know that the sum of the angles of a triangle is $180^{\circ}$.

For $\triangle \mathrm{ABC}: \angle 2+\angle 4+\angle B=1800$

For $\triangle \mathrm{ADC}: ~ \angle 1+\angle 3+\angle \mathrm{D}=1800 \quad \ldots$ (2)
For $\triangle A D C$ :

$$
\begin{equation*}
\angle 1+\angle 3+\angle D=180^{\circ} \tag{2}
\end{equation*}
$$

Adding (1) and (2):
$(\angle 1+\angle 2+\angle 3+\angle 4)+\angle B+\angle D=360^{\circ}$
or $\angle A+\angle B+\angle C+\angle D=360^{\circ}$

Hence, the sum of all the angles of a quadrilateral is $360^{\circ}$.
Q4.

## Answer:

Sum of all the four angles of a quadrilateral is $360^{\circ}$

Let the unknown angle be $x^{\circ} \cdot 76+54+108+x=360238+x=360 x=122$

The fourth angle measures $122^{\circ}$.
Q5.
Answer :

Let the measures of the angles of the given quadrilateral be $(3 x)^{\circ},(5 x)^{\circ},(7 x)^{\circ}$ and $(9 x)$
${ }^{\circ}$. Sum of all the angles of a quadrilateral is $3600 . \therefore 3 x+5 x+7 x+9 x=36024 x=360 x=15$

Angles measure: $(3 \times 15)^{\circ}=45^{\circ}(5 \times 15)^{\circ}=75^{\circ}(7 \times 15)^{\circ}=105^{\circ}(9 \times 15)^{\circ}=135^{\circ}$
○h

## Answer:

Sum of the four angles of a quadrilateral is $360^{\circ}$

If the unknown angle is $\mathrm{x}^{\circ}$, then

Downloaded from www.studiestoday.com RS Aggarwal Solutions Class 8 Mathematics Answer :

Let the three angles measure $\mathrm{x}^{\circ}$ each.

Sum of all the angles of a quadrilateral is $360^{\circ}$
$\therefore x+x+x+120=3603 x+120=3603 x=240 x=2403=80$

Each of the equal angles measure $80^{\circ}$.

คの

## Answer :

Sum of the angles of a quadrilateral is $360^{\circ}$.
$\therefore \angle A+\angle B+600+1000=360^{\circ} \angle A+\angle B=360-100-$
$60=200^{\circ}$ or $12 \angle A+\angle B=100^{\circ} \quad \ldots$ (1)Sum of the angles of a triangle is $180^{\circ}$. In $\triangle A P B: 12 \angle A+\angle B+\angle P=180^{\circ}$
Using equation (1): $100^{\circ}+\angle \mathrm{P}=180^{\circ} \Rightarrow \angle \mathrm{P}=80^{\circ}$
$\therefore \angle \mathrm{APB}=80^{\circ}$
