## Jownloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

(iii) Statistical inferences are not exact.

## Question 3:

Primary data: Primary data is the data collected by the investigator himself with a definite plan in his mind. These data are very accurate and reliable as these being collected by the investigator himself.
Secondary Data: Secondary data is the data collected by a person other than the investigator.
Secondary Data is not very reliable as these are collected by others with purpose other than the investigator and may not be fully relevant to the investigation.

## Question 4:

(i)Variate : Any character which can assume many different values is called a variate.
(ii) Class Interval :Each group or class in which data is condensed is called a class interval.
(iii) Class-Size : The difference between the true upper limit and the true lower limit of a class is called class size.
(iv) Class-mark : The average of upper and lower limit of a class interval is called its class mark.
i.e Class mark $=\frac{\text { upper } \quad \text { limit } \quad+\quad \text { lower } \quad \text { limit }}{2}$
(v) Class limit: Class limits are the two figures by which a class is bounded. The figure on the left side of a class is called lower lower limit and on the right side is called its upper limit.
(vi) True class limits : In the case of exclusive form of frequency distribution, the upper class limits and lower class limits are the true upper limits and the true lower limits. But in the case of inclusive form of frequency distribution, the true lower limit of a class is obtained by subtracting 0.5 from the lower limit of the class. And the true upper limit of the class is obtained by adding 0.5 to the upper limit.
(vii) Frequency of a class : The number of observations falling in a class determines its frequency.
(viii) Cumulative frequency of a class: The sum of all frequencies up to and including that class is called , the cumulative frequency of that class.

## Question 5:

Minimum observation is 0 and maximum observation is 6 . The classes of equal size covering the given data are : (0-2), (2-4), (4-6) and (6-8).
Thus , the frequency distribution may be given as under:

| No of children | Tally marks | Frequency |
| :---: | :---: | :---: |
| $0-2$ | INL INN I | 11 |
| $2-4$ | NN INX II | 17 |
| $4-6$ | INN III | 9 |
| $6-8$ | III | 3 |
|  | Total | 40 |

Question 6:

Downloaded from www.studiestoday.com
S Aggarwal Class 9 Mathematics Solution
Minimum observation is 1 and minimum observation is 24 . The classes of equal size converging the given data are : (0-5), (5-10), (10-15), (15-20), (20-25)
Thus, the frequency distribution may be given as under :

| Marks | Tally Marks | Frequency |
| :---: | :---: | :---: |
| 0-5 | INXI | 6 |
| 5-10 | MNSMNE | 10 |
| 10-15 | INKIII | 8 |
| 15-20 | NWLIII | 8 |
| 20-25 | MW1 111 | 8 |
|  | Total | 40 |

## Question 7:

Minimum observation is 6 and maximum observation is 23 .So the range is $23-6=17$
The classes of equal size covering the given data are : (6-9), (9-12), (12-15), (15-18),
(18-21), (21-24),
Thus the frequency distribution may be given as under :

| Class interval <br> (age) | Tally Marks | No. of students <br> Frequency |
| :---: | :---: | :---: |
| $6-9$ | INX | 5 |
| $9-12$ | III | 4 |
| $12-15$ | III | 4 |
| $15-18$ | MNI II | 7 |
| $18-21$ | III | 3 |
| $21-24$ | INX I\| | 7 |
|  | Total | 30 |

Question 8:
Minimum observation is 210 and maximum observation $=320$
So the range is $(320-210)=110$
The classes of equal size covering the given data are :
(210-230), (230-250), (250-270), (270-290), (290-310), (310-330)
Thus the frequency distribution may be given as under :

| Class interval <br> (Monthly wages) | Tally Marks | No. of workers <br> Frequency |
| :---: | :---: | :---: |
| $210-230$ | IIII | 4 |
| $230-250$ | IIII | 4 |
| $250-270$ | INX | 5 |
| $270-290$ | III | 3 |
| $290-310$ | INW II | 7 |
| $310-330$ | INX | 5 |
|  | Total | 28 |

Question 9:
Minimum observation is 30 and maximum observation is 110
So, range is $100-30=80$
The classes of equal size covering the given data are :
(30-40) , (40-50), , (50-60) , (60-70), (70-80), (80-90), (90-100), (100-110), (110-120)
Thus , the frequency and cumulative frequency table may be given as under :

## Downloaded from www.studiestoday.com S Aggarwal Class 9 Mathematics Solutio

| Class intervals <br> (weight in g.) | Tally Marks | No. of oranges | Cumulative <br> frequency |
| :---: | :---: | :---: | :---: |
| $30-40$ | IIII | 4 | 4 |
| $40-50$ | INX I | 6 | 10 |
| $50-60$ | III | 3 | 13 |
| $60-70$ | INN | 5 | 18 |
| $70-80$ | IN\| IIII | 9 | 27 |
| $80-90$ | INN I | 6 | 33 |
| $90-100$ | II | 2 | 35 |
| $100-110$ | III | 3 | 38 |
| $110-120$ | II | 2 | 40 |
|  | Total | 40 |  |

Question 10:
Minimum observations is 804 and maximum observation is 898 So, range is $898-804$ =94

The class es of equal size covering the given data are :
(800-810), (810-820), (820-830), (840-850), (850-860), (860-870), (870-880) , (880-
890), (890-900)

Thus the frequency table may be given as under :

| Class intervals <br> Weekly wages | Tally marks | No. of workers <br> Frequency |
| :---: | :---: | :---: |
| $800-810$ | III | 3 |
| $810-820$ | II | 2 |
| $820-830$ | $\mid$ | 1 |
| $830-840$ | IN III | 8 |
| $840-850$ | IN | 5 |
| $850-860$ | $\mid$ | 1 |
| $860-870$ | III | 3 |
| $870-880$ | $\mid$ | 1 |
| $880-890$ | \| | 1 |
| $890-900$ | IXN | 5 |
|  | Total | 30 |

Question 11:
Minimum observation 52 and maximum observation is 130
So , The range is $130-52=78$
The classes of equal size covering the given data are :
(50-60), (60-70), (70-80), (80-90), (90-100), (100-110), (110-120), (120-130), (130-
140)

Thus , the frequency table may be given as under :

| oaded from WWW |  |  |
| :---: | :---: | :---: |
| Agoarwal | Clas | 9 M |
| Class interval (in Rupees) | Tally Marks | No. house frequency |

## Exercise 14B

## Question 1:

Take the various types of games along the $x$-axis and the number of students along the $y$-axis.

Along the $y$-axis, take 1 small square $=3$ units.
All the bars should be of same width and same space should be left between the consecutive bars.
Now we shall draw the bar chart, as shown below:

## Question 2:

Take the timings along the $x$-axis and the temperatures along the $y$-axis.
Along the $y$-axis, take 1 small square $=5$ units.
All the bars should be of same width and same space should be left between the consecutive bars.
Now we shall draw the bar chart, as shown below:

## Question 3:

Take the modes of transport along the $x$-axis and the velocities along the $y$-axis.
Along the $y$-axis, take 1 small square $=10$ units.

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

All the bars should be of same width and same space should be left between the
consecutive bars.
Now we shall draw the bar chart, as shown below:

## Question 4:

Take the various types of sports along the $x$-axis and the number of students along the $y$ axis.

Along the $y$-axis, take 1 small square $=10$ units.
All the bars should be of same width and same space should be left between the consecutive bars.

Now we shall draw the bar chart, as shown below:

## Question 5:

Take the academic year along the $x$-axis and the number of students along the $y$-axis. Along the $y$-axis, take 1 big division $=200$ units.

All the bars should be of same width and same space should be left between the consecutive bars.

Now we shall draw the bar chart, as shown below:

Question 6:

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

Take the years along the $x$-axis and the number of scooters along the $y$-axis.
Along the $y$-axis, take 1 big division $=5000$ units.
All the bars should be of same width and same space should be left between the consecutive bars.

Now we shall draw the bar chart, as shown below:

Question 7:
Take the countries along the $x$-axis and the birth rate (per thousand) along the $y$-axis. Along the $y$-axis, take 1 big division $=5$ units.
All the bars should be of same width and same space should be left between the consecutive bars.
Now we shall draw the bar chart, as shown below:

## Question 8:

Take the years along the $x$-axis and the Interest (in Thousand Crore Rupees) along the $y$ axis.
Along the $y$-axis, take 1 big division $=20$ units.
All the bars should be of same width and same space should be left between the consecutive bars.
Now we shall draw the bar chart, as shown below:

Jownloaded from www.studiestoday.com S Aggarwal Class 9 Mathematics Solutior

## Question 9:

Take city along the $x$-axis and distance from Delhi (in Km) along the $y$-axis. Along the $y$-axis, take 1 big division $=200$ units.
All the bars should be of same width and same space should be left between the consecutive bars.
Now we shall draw the bar chart, as shown below:

## Question 10:

Take Country along the $x$-axis and Life expectancy (in years) along the $y$-axis.
Along the $y$-axis, take 1 big division $=10$ units.
All the bars should be of same width and same space should be left between the consecutive bars.
Now we shall draw the bar chart, as shown below:

## Question 11:

Take the number of week along the $x$-axis and rate per $10 g m$ (in Rs.) along the $y$-axis.

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio <br> Along the $y$-axis, take 1 big division $=1000$ units.

All the bars should be of same width and same space should be left between the
consecutive bars.
Now we shall draw the bar chart, as shown below:

Question 12:
Take themode of transport along the $x$-axis and the number of students along the $y$-axis. Along the $y$-axis, take 1 big division $=100$ units.

All the bars should be of same width and same space should be left between the consecutive bars.
Now we shall draw the bar chart, as shown below:

Question 13:
(i) The bar graph shows the marks obtained by a student in various subject in an examination.
(ii) The student is very good in mathematics.
(iii) He is poor in Hindi
(iv) Average marks $=\frac{(60+35+75+50+60)}{5}=\frac{280}{5}=56$

Exercise 14C
Question 1:
Given frequency distribution is as below :

| Daily <br> wages (in <br> Rs) | $140-180$ | $180-220$ | $220-260$ | $260-300$ | $300-340$ | $340-380$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of |  |  |  |  |  |  |

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio <br> workers

In the class intervals, if the upper limit of one class is the lower limit of the next class, it is known as the exclusive method of classification.

Clearly, the given frequency distribution is in the exclusive form.
To draw the required histogram, take class intervals, i.e. daily wages (in Rs.) along x-axis and frequencies i.e.no. of workers along $y$-axis and draw rectangles. So , we get the required histogram.
Since the scale on X-axis starts at 140, a kink(break) is indicated near the origin to show that the graph is drawn to scale beginning at 140.

Question 2:
Given frequency distribution is as below :

| Daily <br> earnings (in <br> Rs) | $600-650$ | $650-700$ | $700-750$ | $750-800$ | $800-850$ | $850-900$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No of stores | 6 | 9 | 2 | 7 | 11 | 5 |

In the class intervals, if the upper limit of one class is the lower limit of the next class, it is known as the exclusive method of classification.
Clearly, the given frequency distribution is in the exclusive form.
We take class intervals, i.e. daily earnings (in Rs .) along $x$-axis and frequencies i.e. number of stores along $y$-axis. So , we get the required histogram.
Since the scale on $X$-axis starts at 600, a kink(break) is indicated near the origin to show that the graph is drawn to scale beginning at 600 .

Question 3:
Give frequency distribution is as below :

| Height |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| (in cm) | $130-136$ | $136-142$ | $142-148$ | $148-154$ | $154-160$ | $160-166$ |
| No. of <br> students | 9 | 12 | 18 | 23 | 10 | 3 |

In the class intervals, if the upper limit of one class is the lower limit of the next class, it is known as the exclusive method of classification.
Clearly, the given frequency distribution is in the exclusive form.
We take class intervals, i.e. height (in cm ) along $x$-axis and frequencies i.e. number of student s along $y$-axis. So we get the required histogram.
Since the scale on $X$-axis starts at 130, a kink(break) is indicated near the origin to show that the graph is drawn to scale beginning at 130.

Question 4:
Give frequency distribution is as below :

| Class Interval | $8-13$ | $13-18$ | $18-23$ | $23-28$ | $28-33$ | $33-38$ | $38-43$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

In the class intervals, if the upper limit of one class is the lower limit of the next class, it is known as the exclusive method of classification.
Clearly, the given frequency distribution is in the exclusive form.
We take class intervals along $x$-axis and frequency along $y$-axis . So , we get the required histogram.
Since the scale on X -axis starts at 8 , a kink(break) is indicated near the origin to show that the graph is drawn to scale beginning at 8 .

Question 5:
Histogram is the graphical representation of a frequency distribution in the form of rectangles, such that there is no gap between any two successive rectangles.
Clearly the given frequency distribution is in inclusive form, that is there is a gap between the upper limit of a class and the lower limit of the next class.
Therefore, we need to convert the given frequency distribution into exclusive form, as shown below:

| Class |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Interval | $4.5-12.5$ | $12.5-20.5$ | $20.5-28.5$ | $28.5-36.5$ | $36.5-44.5$ | $44.5-52.5$ |
| Frequency | 6 | 15 | 24 | 18 | 4 | 9 |

To draw the required histogram, take class intervals, along $x$-axis and frequencies along $y$-axis and draw rectangles. So, we get the required histogram .
Since the scale on $X$-axis starts at 4.5, a kink(break) is indicated near the origin to show that the graph is drawn to scale beginning at 4.5.

Question 6:
Given frequency distribution is as below:

| Age group <br> (in years) | $10-16$ | $17-23$ | $24-30$ | $31-37$ | $38-44$ | $45-51$ | $52-58$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of <br> Illiterate <br> persons | 175 | 325 | 100 | 150 | 250 | 400 | 525 |

Histogram is the graphical representation of a frequency distribution in the form of rectangles, such that there is no gap between any two successive rectangles. Clearly the given frequency distribution is in inclusive form, that is there is a gap between the upper limit of a class and the lower limit of the next class.
Therefore, we need to convert the frequency distribution in exclusive form, as shown below:

| Age <br> group(in <br> years) | $9.5-16.5$ | $16.5-23.5$ | $23.5-30.5$ | $30.5-37.5$ | $37.5-44.4$ | $44.5-$ | $51.5-$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No of |  |  |  |  |  |  |  |
| Illiterate |  |  |  |  |  |  |  |
| persons | 175 | 325 | 100 | 150 | 250 | 400 | 525 |

To draw the required histogram, take class intervals, that is age group, along $x$-axis and frequencies, that is number of illiterate persons along $y$-axis and draw rectangles . So , we get the required histogram.
Since the scale on $X$-axis starts at 9.5, a kink(break) is indicated near the origin to show that the graph is drawn to scale beginning at 9.5.

Question 7:
Given frequency distribution is as below :

| Class Interval | $10-14$ | $14-20$ | $20-32$ | $32-52$ | $52-80$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 5 | 6 | 9 | 25 | 21 |

In the above table, class intervals are of unequal size, so we calculate the adjusted frequency by using the following formula :

Thus, the adjusted frequency table is

| Class Intervals | Frequency | Adjusted Frequency |
| :---: | :---: | :---: |
| $10-14$ | 5 | $\frac{4}{4} \times 5=5$ |
| $14-20$ | 6 | $\frac{4}{6} \times 6=4$ |
| $20-32$ | 9 | $\frac{4}{12} \times 9=3$ |
| $32-52$ | 25 | $\frac{4}{20} \times 25=5$ |
| $52-80$ | 21 | $\frac{4}{28} \times 21=3$ |

Now take class intervals along $x$-axis and adjusted frequency along $y$-axis and constant rectangles having their bases as class-size and heights as the corresponding adjusted frequencies.
Thus, we obtain the histogram as shown below:

## 

Jownloaded from www.studiestoday.com S Aggarwal Class 9 Mathematics Solutior

Question 8:
The given frequency distribution is as below:

| Age in <br> years | $10-20$ | $20-30$ | $30-40$ | $40-50$ | $50-60$ | $60-70$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No of <br> patients | 2 | 5 | 12 | 19 | 9 | 4 |

In order to draw, frequency polygon, we require class marks.
The class mark of a class interval is: $\frac{\text { upper limit } \quad+\quad \text { lower limit }}{2}$
The frequency distribution table with class marks is given below:

| Class Intervals | Class Marks | Frequency |
| :---: | :---: | :---: |
| $0-10$ | 5 | 0 |
| $10-20$ | 15 | 2 |
| $20-30$ | 25 | 5 |
| $30-40$ | 35 | 12 |
| $50-50$ | 45 | 19 |
| $70-70$ | 55 | 9 |
| $70-80$ | 65 | 0 |

In the above table, we have taken imaginary class intervals 0-10 at beginning and 70-80 at the end, each with frequency zero. Now take class marks along $x$-axis and the corresponding frequencies along $y$-axis.
Plot points (5,0), (15,2), $(25,5),(35,12),(45,19),(55,9),(65,4)$ and ( 75,0 ) and draw line segments.

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

Take class intervals along $x$-axis and frequencies along $y$-axis and draw rectangle s of width equal to the size of the class intervals and heights equal to the corresponding frequencies.
Thus we get required histogram.
Now take imaginary class intervals 15-20 at the beginning and 50-55 at the end , each with frequency zero and join the mid points of top of the rectangles to get the required frequency polygon.

Question 11:
The given frequency distribution table is given below :

| Class |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Interval | $600-640$ | $640-680$ | $680-720$ | $720-760$ | $760-800$ | $800-840$ |
| Frequency | 18 | 45 | 153 | 288 | 171 | 63 |

Take class intervals along $x$-axis and frequencies along $y$-axis and draw rectangles of width equal to to size of class intervals and height equal to their corresponding frequencies.
Thus we get the required histogram.
Take imaginary class intervals 560-600 at the beginning and 840-880 at the end, each with frequency zero.
Now join the mid points of the top of the rectangles to get the required frequency polygon.

Question 12:
The given frequency distribution table is as below:

| Class |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Intervals | $1-10$ | $11-20$ | $21-30$ | $31-40$ | $41-50$ | $51-60$ |

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

|  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Frequency | 8 | 3 | 6 | 12 | 2 | 7 |

This table has inclusive class intervals and so these are to be converted into exclusive class intervals (i.e true class limits).
These are (0.5-10.5), (10.5-20.5), (20.5-30.5), (30.5-40.5), (40.5-50.5), and (50.5-60.5) In order to draw a frequency polygon, we need to determine the class marks. Class marks of a class interval $=\frac{\text { upper limit } \quad+\quad \text { lower limit }}{2}$

Take imaginary class interval ( $-9.5-0.5$ ) at the beginning and (60.5-70.5) at the end each with frequency zero. So we have the following table

| Class Intervals | True class Intervals | Class marks | Frequency |
| :---: | :---: | :---: | :---: |
| $(-9)-0$ | $(-9.5)-0.5$ | -4.5 | 0 |
| $1-10$ | $0.5-10.5$ | 5.5 | 8 |
| $11-20$ | $10.5-20.5$ | 15.5 | 3 |
| $21-30$ | $20.5-30.5$ | 25.5 | 6 |
| $31-40$ | $30.5-40.5$ | 35.5 | 12 |
| $41-50$ | $40.5-50.5$ | 45.5 | 2 |
| $51-60$ | $50.5-60.5$ | 55.5 | 7 |
| $61-70$ | $60.5-70.5$ | 65.5 | 0 |

Now, take class marks along $x$-axis and their corresponding frequencies along $y$-axis.
Mark the points and join them.
Thus, we obtain a complete frequency polygon as shown below:

## Jownloaded from www.studiestoday.com S Aggarwal Class 9 Mathematics Solutio

## Exercise 14D

## Mean, Median, Mode and Range

## Mean

Add all the numbers then divide by the amount of numbers

$$
9,3,1,8,3,6
$$

$$
9+3+1+8+3+6=30
$$

$$
30 \div 6=5
$$

The mean is 5

## Median

Order the set of numbers, the median is the middle number

$$
9,3,1,8,3,6
$$

$$
1,3,3,6,8,9
$$

The median is 4.5

## Question 1:

(i) first eight natural numbers are:

1,2,3,4,5,6,7and 8

## Downloaded from www.studiestoday.com S Aggarwal Class 9 Mathematics Solutior

$$
\begin{aligned}
\text { Mean }= & \frac{\text { Sum of numbers }}{\text { Total numbers }} \\
= & \frac{(1+2+3+4+5+6+7+8)}{8} \\
& =\frac{36}{8}=4.5
\end{aligned}
$$

Mean $=4.5$
(ii) First ten odd numbers are:

1,3,5,7,9,11,13,15, 17, and 19

$$
\begin{aligned}
\frac{\text { Sum of numbers }}{\text { Total numbers }} & =\frac{(1+3+5+7+9+11+13+15+17+19)}{10} \\
& =\frac{100}{10}=10
\end{aligned}
$$

Mean $=10$
(iii) First five prime numbers are: 2, 3, 5, 7, 11

$$
\begin{aligned}
\text { Mean } & =\frac{\text { Sum of numbers }}{\text { Total numbers }} \\
& =\frac{(2+3+5+7+11)}{5} \\
& =\frac{28}{5}=5.6 \\
\text { Mean } & =5.6
\end{aligned}
$$

(iv) First six even numbers are: 2,4,6,8,10,12

$$
\begin{aligned}
& \text { Mean= } \frac{\text { Sum of numbers }}{\text { Total numbers }} \\
& =\frac{(2+4+6+8+10+12)}{6}=\frac{42}{6}=7
\end{aligned}
$$

$$
\text { Mean = } 7
$$

(v) First seven multiples of 5 are: 5,10,15, 20, 25, 30, 35

$$
\begin{aligned}
& \therefore \quad \text { Mean }=\frac{\text { Sum of numbers }}{\text { Total numbers }} \\
& =\frac{(5+10+15+20+25+30+35)}{7} \\
& =\frac{140}{7}=20
\end{aligned}
$$

Therefore, Mean =20
(vi) Factors of 20 are: 1,2,4,5,10,20
$\therefore \quad$ Mean $=\frac{\text { Sum of numbers }}{\text { Total numbers }}$
$=\frac{(1+2+4+5+10+20)}{6}=\frac{42}{6}=7$

## Jownloaded from www.studiestoday.com S Aggarwal Class 9 Mathematics Solutio

Question 2:

$$
\begin{aligned}
\text { Mean } & =\frac{\text { Sum of numbers }}{\text { Total numbers }} \\
& =\frac{(2+4+3+4+2+0+3+5+1+6)}{10} \\
& =\frac{30}{10}=10 \\
\text { Mean } & =3
\end{aligned}
$$

Question 3:

$$
\begin{aligned}
& \therefore \quad \text { Mean }=\frac{\text { Sum of numbers }}{\text { Total numbers }} \\
& =\frac{(105+216+322+167+273+405+346}{7} \\
& =\frac{1834}{7}=262 \\
& \therefore \text { Average number }=262
\end{aligned}
$$

Question 4:

$$
\begin{aligned}
\text { Mean temperature } & =\frac{\text { Sum of temperatures }}{\text { Numbers of days }} \\
& =\frac{(35.5+30.8+27.3+32.1+23.8+29.9)}{6} \\
& =\frac{179.4}{6}=29.9
\end{aligned}
$$

Mean temperature $=29.9^{\circ} \mathrm{F}$.

```
Question 5:
    Mean \(=\frac{\text { sum of the marks }}{\text { numbers of students }}\)
    \(=\frac{(64+36+47+23+0+19+81+93+72+35+3+1)}{12}\)
    \(=\frac{474}{12}=39.5\)
```

Mean percentageof marks=39.5

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

mean of the given number $=\frac{(7+9+11+13+x+21)}{6}$
$\left[\because\right.$ Mean $\left.=\frac{\text { Sum of the observation }}{\text { Number of observation }}\right]$
$=\frac{(61+x)}{6}$
But mean $=13$ (given)
$\frac{61+x}{6}=13$
$\Rightarrow 61+x=78$
$\Rightarrow \quad x=78-61=17$
the value of $x=17$

## Question 7:

Let the given numbers be $x_{1}, x_{2} \ldots \ldots . . x_{24}$
$\Rightarrow \quad$ Mean $=\frac{\left(x_{1}+x_{2}+\ldots . .+x_{24}\right)}{24}$
$\frac{x_{1}+x_{2}+\ldots . .+x_{24}}{24}=35$
$\Rightarrow x_{1}+x_{2}+\ldots . x_{24}=840 \ldots .$. (i)
The new numbers are $\left(x_{1}+3\right),\left(x_{2}+3\right) \ldots\left(x_{24}+3\right)$
Mean of the new numbers
$=\frac{\left(x_{1}+3\right)+\left(x_{2}+3\right)+\ldots .+\left(x_{24}+3\right)}{24}=\frac{840+72}{24}[u \operatorname{sing}(i)]$

$$
=\frac{912}{24}=38
$$

The new mean $=38$

## Question 8:

Let the given numbers be $x_{1}, x_{2} \ldots \ldots . . x_{20}$
Then , the mean of these numbers $=$

$$
\begin{array}{ll}
\therefore & \frac{x_{1}}{}+x_{2}+\ldots . .+x_{20} \\
20 & =43  \tag{i}\\
\Rightarrow & x_{1}+x_{2}+\ldots .+x_{20}=860
\end{array}
$$

The new number are $\left.\left(x_{1}-6\right)+x_{2}-6\right) \ldots\left(x_{20}-6\right)$
The mean of the new numbers

$$
\begin{aligned}
= & \frac{\left(x_{1}-6\right)+\left(x_{2}-6\right)+\ldots+\left(x_{20}-6\right)}{20} \\
& =\frac{860-120}{20} \quad \ldots .[\text { using (i)] } \\
& =\frac{740}{20}=37
\end{aligned}
$$

The new mean $=37$

## Question 9:

Let the given numbers be $\mathrm{x}_{1}, \mathrm{x}_{2} \ldots \ldots . . . . . \mathrm{x}_{15}$
Then , the mean of these numbers $=$

$$
\begin{aligned}
& \therefore \frac{\left(x_{1}+x_{2}+\ldots . x_{15}\right)}{15}=27 \\
& \Rightarrow \quad x_{1}+x_{2}+\ldots . x_{15}=405
\end{aligned}
$$

The new numbers are $\left(x_{1} \times 4\right)+\left(x_{2} \times 4\right) \ldots\left(x_{15} \times 4\right)$
Mean of the new numbers $=\frac{\left(x_{1} \times 4\right)+\left(x_{2} \times 4\right) \ldots\left(x_{15} \times 4\right)}{15}$

$$
=\frac{405 \times 4}{15}=\frac{1620}{15}=108
$$

The new mean $=108$

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

## Question 10:

Let the given number be $x_{1}, x_{2} \ldots x_{12}$
Then the mean of these numbers $=40$

$$
\begin{array}{ll}
\therefore & \frac{\left(x_{1}+x_{2}+\ldots .+x_{12}\right)}{12}=40 \\
\Rightarrow & x_{1}+x_{2}+\ldots .+x_{12}=480
\end{array}
$$

$$
\text { The new numbers }=\frac{\left(x_{1} \div 8\right)+\left(x_{1} \div 8\right)+\ldots .+\left(x_{12} \div 8\right)}{12}
$$

$$
=\frac{480 \div 8}{12}=\frac{60}{12}=5
$$

$$
\text { thenew mean = } 5
$$

## Question 11:

Let the given numbers be $x_{1}, x_{2}, \ldots, x_{20}$
Let $\bar{x}$ be the mean of these numbers

$$
\begin{aligned}
& \therefore \bar{X}=\frac{x_{1}+x_{2}+\ldots \ldots+x_{20}}{20}=18 \\
& \Rightarrow x_{1}+x_{2}+\ldots+x_{20}=18 \times 20=360 \ldots \text { (1) }
\end{aligned}
$$

But it is given that 3 is added to each
of the first ten numbers.
Therefore, the first new ten numbers are
$\left(x_{1}+3\right),\left(x_{2}+3\right), \ldots,\left(x_{10}+3\right)$
Let $\overline{x^{\prime}}$ be the mean of new numbers

From (1), we know that $x_{1}+x_{2}+\ldots .+x_{20}=360$
$\therefore$ Mean of the new set of 20 numbers

$$
=\frac{360+30}{20}=\frac{390}{20}=19.5
$$

Mean of the new set of 20 numbers $=19.5$

## Question 12:

Mean weight of the boys $=48 \mathrm{~kg}$
Therefore, Mean weight $=\frac{\text { Sumoftheweightofsixboys }}{6}=48$
Sum of the weight of 6 boys $=(48 \times 6) \mathrm{kg}=288 \mathrm{~kg}$
Sum of the weights of 5 boys $=(51+45+49+46+44) \mathrm{kg}=235 \mathrm{~kg}$
Weight of the sixth boy=(sum of the weights of 6 boys ) - (sum of the weights of 5 boys)
$=(288-235)=53 \mathrm{~kg}$.
$\therefore$ weight of the sixth boy $=53 \mathrm{~kg}$

## Question 13:

Calculated mean marks of 50 students $=39$
calculated sum of these marks=(39×50)=1950
Corrected sum of these marks
$=[1950$-(wrong number) + (correct number)]
$=(1950-23+43)=1970$
$\therefore$ correct mean $=\frac{1970}{50}=39.4$

Question 14:
calculated mean of 100 items $=64$
sum of 100 items, as calculated $=(100 \times 64)=6400$

$$
\begin{aligned}
& \left(x_{1}+3\right),\left(x_{2}+3\right), \ldots,\left(x_{10}+3\right), x_{11}, \ldots, x_{20} . \\
& \overline{x^{\prime}}=\frac{\left(x_{1}+3\right)+\left(x_{2}+3\right)+\ldots .+\left(x_{10}+3\right)+x_{11}+\ldots+x_{20}}{20} \\
& =\frac{\left(x_{1}+x_{2}+\ldots .+x_{20}\right)+3 \times 10}{20}
\end{aligned}
$$

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio <br> Correct sum of these items = [6400-(wrong items )+(correct items)]

$=[6400-(26+9)+(36+90)]$
$=[6400-35+126]=6491$
$\therefore$ Correct mean $=\frac{6491}{100}=64.91$

## Question 15:

Mean of 6 numbers $=23$
Sum of 6 numbers $=(23 \times 6)=138$
Again, mean of 5 numbers $=20$
Sum of 5 numbers $=(20 \times 5)=100$
The excluded number= (sum of 6 numbers )-(sum of 5 numbers)
$=(138-100)=38$
$\therefore$ The excluded number=38.

## Exercise 14E

## Question 1:

Mean marks of 7 students $=226$
Sum of marks of seven students $=(226 \times 7)=1582$
Marks obtained by 6 students $=(340+180+260+56+275+307)$
=1418
$\therefore$ Marks obtained by seventh student
$=[($ Sum of marks of 7 students)-(marks obtained by 6 students)]
$=(1582-1418)=164$
$\therefore$ Marks obtained by seventh student=164

## Question 2:

Mean weight of 34 students $=46.5 \mathrm{~kg}$
Total weight of 34 students $=(34 \times 46.5) \mathrm{kg}=1581 \mathrm{~kg}$
Mean weight of 34 students and the teacher $=(46.5+0.5) \mathrm{kg}=47 \mathrm{~kg}$ (since $500 \mathrm{~g}=0.5 \mathrm{~kg}$ )
$\therefore$ Total weight of 34 students and the teacher
$=(47 \times 35) \mathrm{kg}=1645 \mathrm{~kg}$
$\therefore$ Weight of the teacher $=(1645-1581) \mathrm{kg}=64 \mathrm{~kg}$

## Question 3:

Mean weight of 36 students $=41 \mathrm{~kg}$
Total weight of 36 students $=41 \times 36 \mathrm{~kg}=1476 \mathrm{~kg}$
One student leaves the class mean is decreased by 200 g .
$\therefore$ New mean $=(41-0.2) \mathrm{kg}=40.8 \mathrm{~kg}$ (since $200 \mathrm{~g}=0.2 \mathrm{~kg}$ )
Total weight of 35 students $=40.8 \times 35 \mathrm{~kg}=1428 \mathrm{~kg}$.
$\therefore$ the weight of the student who left $=(1476-1428) \mathrm{kg}=48 \mathrm{~kg}$.

## Question 4:

Mean weight of 39 students $=40 \mathrm{~kg}$
Total weight of 39 students $=40 \times 39)=1560 \mathrm{~kg}$
One student joins the class mean is decreased by 200 g .
$\therefore$ New mean $=(40-0.2) \mathrm{kg}=39.8 \mathrm{~kg}$ (since $200 \mathrm{~g}=0.2 \mathrm{~kg}$ )
Total weight of 40 students $=(39.8 \times 40) \mathrm{kg}=1592 \mathrm{~kg}$.
$\therefore$ the weight of new student
$=$ Total weight of 40 students - Total weight of 39 students
$=1592-1560=32 \mathrm{~kg}$

Question 5:

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

Mean salary of 20 workers $=$ Rs. 7650
Total salary of 20 workers $=$ Rs $(7650 \times 20)=$ Rs. 153000.
Now if managers salary is added mean becomes Rs. 8200
$\therefore$ Total salary of 20 workers + manager's salary= Rs. $(8200 \times 21)$
=Rs. 172200
$\therefore$ Manager's salary per month
= Total salary of 20 workers and the Manager - Total salary of 20 workers
=Rs(172200-153000)
=Rs. 19200

## Question 6:

Mean monthly wage of 10 persons $=$ Rs. 9000
Total monthly wage of 10 persons $=$ Rs $(9000 \times 10)$
=Rs. 90000

```
New mean monthly wage
[(totalmonthly wage of10 persons) - (wages ōt wor ker who left) +
\(=\) (wages of worker who joined)]
\(=\frac{R s .90000-R s .8100+R s .7200)}{10}\)
\(=\operatorname{Rs} .\left(\frac{89100}{10}\right)=8910\)
\(\therefore\) Thenew monthly average wage \(=\operatorname{Rs} 8910\)
```

## Question 7:

Mean consumption of petrol for the first 7 months $=330$ litres
Total consumption of petrol for the first 7 months=( $330 \times 7$ ) liters=2310 litres
Mean consumption of petrol for the next five 5 months $=270$ litres
Total consumption of petrol for the next five 5 months $=(270 \times 5)=1350$ litres
Total consumption of petrol in one year
$=(2310+1350)$ litres
$=3660$ litres.
$\therefore$ Mean consumption of petrol $=\frac{3660}{12}=305$ litres per month

## Question 8:

Mean of 15 numbers=18
Total sum of 15 numbers $=(18 \times 15)=270$
Remaining numbers $=25-15=10$
Mean of 10 numbers $=13$
Total sum of 10 numbers $=(13 \times 10)=130$
$\therefore$ Total sum of 25 numbers $=(270+130)=400$
$\therefore$ Mean of 25 numbers $=\frac{400}{25}=16$

## Question 9:

Mean weight of 60 students $=52.75 \mathrm{~kg}$
Sum of weight of 60 students $=60 \times 52.75 \mathrm{~kg}$
Mean weight of 25 students $=51$
Sum of weight of 25 students $=25 \times 51 \mathrm{~kg}$
Remaining students $=60-25=35$
Total weight of the remaining 35 students
$=$ Sum of weight of 60 students - Sum of weight of 25 students

## Downloaded from www.studiestoday.com S Aggarwal Class 9 Mathematics Solutio

$=(60 \times 52.75-25 \times 51) \mathrm{kg}$
$=(3165-1275)=1890 \mathrm{~kg}$
$\therefore$ Mean weight of remaining students $=\frac{1890}{35}=54 \mathrm{~kg}$

## Question 10:

The increase in the average of 10 oarsmen $=1.5 \mathrm{~kg}$
Total weight increased $=(1.5 \times 10) \mathrm{kg}=15 \mathrm{~kg}$
Since the man weighing 58 kg has been replaced,
Weight of the new man $=(58+15) \mathrm{kg}=73 \mathrm{~kg}$.

## Question 11:

Mean of 8 numbers=35
$\therefore$ Total sum of 8 numbers $=35 \times 8=280$
Since One number is excluded, New mean $=35-3=32$
$\therefore$ Total sum of 7 numbers $=32 \times 7=224$
the excluded number $=$ Sum of 8 numbers - Sum of 7 numbers
$=280-224=56$

## Question 12:

Mean of 150 items $=60$
Total Sum of 150 items $=150 \times 60=9000$
$\therefore$ Correct sum of items $=[($ sum of 150 items)-(sum of wrong items) + (sum of right items)]
$=[9000-(52+8)+(152+88)]$
$=[9000-(52+8)+(152+88)]$
= 9180
$\therefore$ Correct mean $=\frac{9180}{150}=61.2$

## Question 13:

Mean of 31 results=60
Total sum of 31 results $=31 \times 60=1860$
Mean of the first 16 results $=16 \times 58=928$
Total sum of the first 16 results $=16 \times 58=928$
Mean of the last 16 results $=62$
Total sum of the last 16 results $=16 \times 62=992$
$\therefore$ The 16th result $=928+992-1860$
= 1920-1860 = 60
$\therefore$ The 16th result $=60$.

## Question 14:

Mean of 11 numbers $=42$
Total sum of 11 numbers $=42 \times 11=462$
Mean of the first 6 numbers $=37$
Total sum of first 6 numbers $=37 \times 6=222$
Mean of the last 6 numbers $=46$
Total sum of last 6 numbers $=6 \times 46=276$
$\therefore$ The 6 th number $=276+222-462$
$=498-462=36$
$\therefore$ The 6 th number $=36$

Question 15:
Mean weight of 25 students $=52 \mathrm{~kg}$

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio <br> Total weight of 25 students $=52 \times 25 \mathrm{~kg}=1300 \mathrm{~kg}$

Mean of the first 13 students $=48 \mathrm{~kg}$
Total weight of the first 13 students $=48 \times 13 \mathrm{~kg}=624 \mathrm{~kg}$
Mean of the last 13 students $=55 \mathrm{~kg}$
Total weight of the last 13 students $=55 \times 13 \mathrm{~kg}=715 \mathrm{~kg}$
$\therefore$ The weight of 13 th student
$=$ Total weight of the first 13 students + Total weight of the last 13 students - Total
weight of 25 students
$=624+715-1300 \mathrm{~kg}$
$=39 \mathrm{~kg}$.
Therefore, the weight of 13th student is 39 kg .

Question 16:
Mean score of 25 observations $=80$
Total score of 25 observations $=80 \times 25=2000$
Mean score of 55 observations $=60$
Total score of 55 observations $=60 \times 55=3300$
Total no. of observations $=25+55=80$ observations
$\therefore$ Total score $=2000+3300=5300$
$\therefore$ Mean score $=\frac{5300}{80}=66.25$

Question 17:
Average marks of 4 subjects $=50$
Total marks of 4 subjects $=50 \times 4=200$
$\therefore 36+44+75+x=200$
$\Rightarrow 155+x=200$
$\Rightarrow \mathrm{x}=200-155=45$
$\therefore$ The value of $\mathrm{x}=45$

## Question 18:

Mean monthly salary of 75 workers = Rs. 5680
So, Total monthly salary of 75 workers $=$ Rs. $5680 \times 75=$ Rs. 426000
Mean monthly salary of 25 workers = Rs. 5400
So, Total monthly salary of 25 workers = Rs. $5400 \times 25=$ Rs. 135000
Mean monthly salary of 30 workers = Rs. 5700
So, Total monthly salary of 30 workers $=$ Rs. $5700 \times 30=$ Rs. 171000
Remaining workers $=75-55=20$ workers
Total salary of remaining 20 workers
=Rs. [426000-(135000 + 171000)]
$=$ Rs. [426000-306000]
=Rs. 120000
$\therefore$ Mean salary of the remaining 20 workers= Rs. $\frac{120000}{20}=$ Rs. 6000

Question 19:
Let the distance of mark from the staring point be xkm .
Then, time taken by the ship reaching the marks $=\left(\frac{x}{15}\right)$ hours (since time $=\frac{\text { distance }}{\text { speed }}$ Time taken by the ship reaching the starting point from the marks $=\left(\frac{x}{10}\right)$ hours
Total time taken $=\frac{x}{15}+\frac{x}{10}=\frac{x}{6}$ hours
Total distance covered $=x+x=2 x \mathrm{~km}$.
$\therefore$ average speed of whole journey $=2 x \div \frac{x}{6}=\frac{2 x \times 6}{x}=12 \mathrm{~km} /$ hour

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

Question 20:
Total number of students $=50$
Total number of girls $=50-40=10$
Average weight of the class $=44 \mathrm{~kg}$
Total weight of 50 students $=44 \times 50 \mathrm{~kg}=2200 \mathrm{~kg}$
Average weight of 10 girls $=40 \mathrm{~kg}$
Total weight of 10 girls $=40 \times 10 \mathrm{~kg}=400 \mathrm{~kg}$
$\therefore$ Total weight of 40 boys $=2200-400 \mathrm{~kg}=1800 \mathrm{~kg}$ 1800
$\therefore$ the average weight of the boys $=40=45 \mathrm{~kg}$

## Exercise 14F

Question 1:
For calculating the mean, we prepare the following table :

| Daily wages (in Rs)$\left(X_{i}\right)$ | No of workers |  |
| :---: | :---: | :---: |
|  | (fi) | $\mathrm{f}_{\mathrm{i}} \mathrm{i}$ |
| 90 | 12 | 1080 |
| 110 | 14 | 1540 |
| 120 | 13 | 1560 |
| 130 | 11 | 1430 |
| 150 | 10 | 1500 |
|  | $\sum f_{i}=60$ | 7110 |

Mean $=\frac{\sum f_{i} x_{i}}{\sum f_{i}}=\frac{7110}{60}=118.5$
mean of daily wages of 60 worker $s=$ Rs. 118.50

Question 2:
For calculating the mean, we prepare the following frequency table :

| Weight (in kg) | No of workers |  |
| :---: | :---: | :---: |
| $\left(\mathrm{X}_{\mathrm{i}}\right)$ | $\left(\mathrm{f}_{\mathrm{i}}\right)$ | $\mathrm{f}_{\mathrm{i}} \mathrm{X}_{\mathbf{i}}$ |
| 60 | 4 | 240 |
| 63 | 3 | 189 |

Jownloaded from www.studiestoday.com
S Aggarwal Class 9 Mathematics Solutior

| 66 | 2 |  |
| :---: | :---: | :---: |
| 69 | 2 | 132 |
| 72 | 1 | 138 |
|  | $\sum f_{i}=12$ | 771 |

Mean $=\frac{\sum f_{i} x_{i}}{\sum f_{i}}=\left(\frac{771}{12}\right) \mathrm{kg}=64.25 \mathrm{~kg}$
$\therefore$ mean weight of the worker $s=64.25 \mathrm{~kg}$

Question 3:
For calculating the mean, we prepare the following frequency table :

| Age (in years) $\left(X_{i}\right)$ | Frequency <br> (fi) | $\mathrm{f}_{\mathrm{i}} \mathrm{X}_{\mathrm{i}}$ |
| :---: | :---: | :---: |
| 15 | 3 | 45 |
| 16 | 8 | 128 |
| 17 | 9 | 153 |
| 18 | 11 | 198 |
| 19 | 6 | 114 |
| 20 | 3 | 60 |
|  | $\sum f_{i}=40$ | 698 |

Mean $=\frac{\sum f_{i} x_{i}}{\sum f_{i}}=\frac{698}{40}=17.45$
mean age of the students $=17.45$ years.

Question 4:
For calculating the mean, we prepare the following frequency table :

Downloaded from www.studiestoday.com S Aggarwal Class 9 Mathematics Solutior

| $\left(\mathbf{X}_{\mathbf{i}}\right)$ | $\left(\mathbf{f}_{\mathbf{i}}\right)$ | $\mathbf{f}_{\mathbf{i}} \mathbf{X}_{\mathbf{i}}$ |
| :---: | :---: | :---: |
| 10 | 7 | 70 |
| 30 | 8 | 240 |
| 70 | 10 | 500 |
| 89 | 15 | 1050 |
|  |  | 890 |

Mean $=\frac{\sum f_{i_{i}}}{\sum f_{i}}=\frac{2750}{50}=55$.

Question 5:
We prepare the following frequency table:

| $\left(\mathbf{X}_{\mathbf{i}}\right)$ | $\left(\mathbf{f}_{\mathbf{i}}\right)$ | $\mathbf{f}_{\mathbf{i}} \mathbf{X}_{\mathbf{i}}$ |
| :---: | :---: | :---: |
| 3 | 6 | 18 |
| 5 | 8 | 40 |
| 7 | 15 | 105 |
| 9 | 8 | 9 P |
| 11 | 4 | 88 |
| 13 | $\sum f_{i}=41+p$ | $\sum f_{i} x_{i}=303+9 p$ |

$$
\begin{aligned}
& \text { Mean }=\frac{\sum f_{x_{i}}}{\sum f_{i}}=\frac{303+\Phi P}{41+P} \\
& \text { Butmean }=8 \text { (given) } \\
& \therefore \quad \frac{303+9 P}{41+p}=8 \\
& \Rightarrow 303+9 p=8(41+p) \\
& \Rightarrow 303+9 p=328+8 p
\end{aligned}
$$

Downloaded from www.studiestoday.com

Jownloaded from www.studiestoday.com S Aggarwal Class 9 Mathematics Solutior
$\Rightarrow 9 p-8 p=328-303$
$\Rightarrow P=25$
$\therefore$ the value of $\mathrm{P}=25$

Question 6:
We prepare the following frequency distribution table:

| $\left(\mathbf{X}_{\mathbf{i}}\right)$ | $\left(\mathbf{f}_{\mathbf{i}}\right)$ | $\mathbf{f}_{\mathbf{i}} \mathbf{X}_{\mathbf{i}}$ |
| :---: | :---: | :---: |
| 15 | 8 | 120 |
| 20 | 7 | 140 |
| 25 | $\mathbf{P}$ | 25 p |
| 30 | 14 | 420 |
| 40 | 6 | 240 |
|  |  |  |

Mean $=\frac{\sum f_{i} x_{i}}{\sum f_{i}}=\frac{1445+25 p}{50+p}$
But mean $=28.25$ given
$\therefore \quad \frac{1445+25 p}{50+p}=28.25$
$\Rightarrow 1445+25 \mathrm{p}=(28.25)(50+\mathrm{p})$
$\Rightarrow 1445+25 p=1412.50+28.25 p$
$\Rightarrow-28.25 p+25 p=-1445+1412.50$
$\Rightarrow-3.25 p=-32.5$
$\Rightarrow{ }^{3.25}=10$
$\therefore$ the value of $\mathrm{p}=10$

## Question 7:

We prepare the following frequency distribution table:

| $\left(X_{i}\right)$ | $\left(f_{i}\right)$ | $\mathbf{f}_{\mathbf{i}} \mathbf{X}_{\mathbf{i}}$ |
| :---: | :---: | :---: |
| 8 | 12 | 96 |
| 12 | 16 | 192 |
| 15 | 20 | 300 |

$\therefore$ Mean $=\frac{\sum f_{i} x_{i}}{\sum f_{i}}=\frac{1228+24 p}{100}$
But mean $=16.6$ (given $)$
$\frac{1228+24 p}{100}=16.6$
$\Rightarrow 1228+24 p=1660$
$\Rightarrow 24 p=1660-1228$
$\Rightarrow 24 p=432$
$\Rightarrow \frac{432}{24}=18$
$\therefore$ the value of $p=18$

## Question 8:

Let $f_{1}$ and $f_{2}$ be the missing frequencies.
We prepare the following frequency distribution table.

| $\left(\mathbf{X}_{\mathbf{i}}\right)$ | $\left(\mathbf{f}_{\mathbf{i}}\right)$ | $\mathbf{f}_{\mathbf{i} \mathbf{x}_{\mathbf{i}}}$ |
| :---: | :---: | :---: |
| 10 | 17 | 170 |
| 30 | $\mathrm{f}_{1}$ | $30 f_{1}$ |
| 50 | 32 | 1600 |
| 70 | $f_{2}$ | $70 f_{2}$ |
| 90 | 120 | 1710 |
| Total |  | $3480+30 f_{1}+70 f_{2}$ |

[^0]Jownloaded from www.studiestoday.com S Aggarwal Class 9 Mathematics Solutior

Mean $=\frac{\sum f_{i} x_{i}}{\sum f_{i}}=\frac{3480+30 f_{1}+70 f_{2}}{120}$

But mean $=50$ (given)
Therefore, we have,
$50=\frac{7120-40 \mathrm{f}_{1}}{120}$
$6000=7120-40 f_{1}$
$40 \mathrm{f}_{1}=1120$
$\mathrm{f}_{1}=\frac{1120}{40}=28$
Substituting the value of f1 in equation 1 , we have,
f2 $=52-28=24$
Thus, the missing frequencies are $\mathrm{f} 1=28$ and $\mathrm{f} 2=24$ respectively.

Question 9:
Let the assumed mean $(\mathrm{A})=900$

| Weekly wages $\left(X_{i}\right)$ | No of workers (fi) | $\begin{aligned} & d_{i}=\left(x_{i}-A\right) \\ & =x_{i}-900 \end{aligned}$ | $f_{i} \times d_{i}$ |
| :---: | :---: | :---: | :---: |
| 800 | 7 | -100 | -700 |
| 820 | 14 | -80 | -1120 |
| 860 | 19 | -40 | -760 |
| 900 | 25 | 0 | 0 |
| 920 | 20 | 20 | 400 |
| 980 | 10 | 80 | 800 |
| 1000 | 5 | 100 | 500 |
|  | $\sum f_{i}=100$ |  | -880 |

Let $\bar{X}$ be the mean. Using formula,
$\overline{\mathrm{X}}=\mathrm{A}+\frac{\sum f_{i} \times d_{i}}{\sum f_{i}}$
$=\left[900+\left(\frac{-880}{100}\right)\right]$
$=900-8.80$
$=891.20$
mean weekly wages =Rs. 891.20

Jownloaded from www.studiestoday.com
S Aggarwal Class 9 Mathematics Solutior
Question 10:
Let the assumed mean be $\mathrm{A}=67$

| Height in $\mathrm{cm}\left(\mathrm{X}_{\mathrm{i}}\right)$ | No of plants <br> (fi) | $\begin{gathered} d_{i}=\left(x_{i}-A\right) \\ =\left(x_{i}-67\right) \end{gathered}$ | $f_{i} \mathrm{~d}_{\mathrm{i}}$ |
| :---: | :---: | :---: | :---: |
| 61 | 5 | -6 | -30 |
| 64 | 18 | -3 | -54 |
| 67 | 42 | 0 | 0 |
| 70 | 27 | 3 | 81 |
| 73 | 8 | 6 | 48 |
|  |  | 100 | $\sum f_{i} d_{i}=45$ |

Let $\bar{x}$ be the mean.
Therefore,
Mean, $\bar{x}=A+\frac{\sum f_{i} \times d_{i}}{\sum f_{i}}$, where $A$ is the assumed mean
$=67+\frac{45}{100}$
$=67+0.45$
$=67.45$
Therefore, mean height of the plants is 67.45 cm .

Question 11:
Clearly, $\mathrm{h}=1$. Let the assumed mean $\mathrm{A}=21$

| $\left(\mathbf{X}_{\mathbf{i}}\right)$ | $\left.\mathbf{f}_{\mathbf{i}}\right)$ | $u_{i}=\frac{x_{i}-21}{1}$ | $\mathbf{f}_{\mathbf{i}} \mathbf{u}_{\mathbf{i}}$ |
| :---: | :---: | :---: | :---: |
| 18 | 170 | -3 | -510 |
| 19 | 320 | -2 | -640 |
| 20 | 530 | -1 | -530 |
| 21 | 700 | 0 | 0 |
| 22 | 140 | 230 | 230 |
| 24 | 110 |  | 230 |

Jownloaded from www.studiestoday.com
S Aggarwal Class 9 Mathematics Solutior

|  |  |  |  |
| :---: | :---: | :---: | :---: |
| Total | $\sum f_{i}=2200$ |  | $\sum f_{i} u_{i}=-840$ |

Let $\bar{x}$ be the mean.
Using formula,

$$
\begin{aligned}
& \text { Mean, } \begin{aligned}
& \bar{x}=\mathrm{A}+\mathrm{h} \times \frac{\sum \mathrm{f}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}}}{\sum \mathrm{f}_{\mathrm{i}}} \\
&=21+1 \times\left(\frac{-840}{2200}\right) \\
&=21+(-0.38) \\
&=20.62 \\
& \text { Thus the mean is } 20.62
\end{aligned}
\end{aligned}
$$

Question 12:
Clearly, $h=(x 2-\times 1)$
$=(600-200)=400$
Let assumed mean $A=1000$

| Height (in m) $\left(\mathrm{X}_{\mathrm{i}}\right)$ | No of villages $\left(\mathrm{f}_{\mathrm{i}}\right)$ | $u_{i}=\frac{x_{i-1000}}{400}$ | $\mathrm{f}_{\mathrm{i}} \mathbf{u _ { i }}$ |
| :---: | :---: | :---: | :---: |
| 200 | 142 | -2 | -284 |
| 600 | 265 | -1 | $-265$ |
| 1000 | 560 | 0 | 0 |
| 1400 | 271 | 1 | 271 |
| 1800 | 89 | 2 | 178 |
| 2200 | 16 | 3 | 48 |
| Total | $\sum f_{i}=1343$ |  | $\sum f_{i} u_{i}=-52$ |

Let $\bar{x}$ be the mean.

$$
\begin{aligned}
& \text { Using formula, } \\
& \text { Mean, } \begin{aligned}
\bar{x} & =A+h \times \frac{\sum f_{i} u_{i}}{\sum f_{i}} \\
& =1000+400 \times\left(\frac{-52}{1343}\right) \\
& =1000+400 \times(-0.0387) \\
& =1000+(-15.488) \\
& =98451
\end{aligned}
\end{aligned}
$$

Thus, the mean height is 984.51 m

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

Question 1:
(i) Arranging the data in accending order, we have

2,2,3, 5, 7, 9, 9, 10, 11
Here $\mathrm{n}=9$, which is odd

$$
\begin{aligned}
\text { median } & =\frac{1}{2}(n+1) \text { th term } \\
& =\frac{(9+1)}{2} \text { th term } \\
& =\text { value of the } 5 \text { th term } \\
& =7 \\
\therefore \text { median } & =7
\end{aligned}
$$

(ii) Arranging the data in ascending order, we have
$6,8,9,15,16,18,21,22,25$
Here $n=9$, which is odd
median $=\frac{1}{2}(n+1)$ th term
$=\frac{(9+1)}{2}$ th term
$=$ value of the 5th term
$=16$
median $=16$
(iii) Arranging data in ascending order:
$6,8,9,13,15,16,18,20,21,22,25$
Here $\mathrm{n}=11$ odd
median $=\frac{1}{2}(n+1)$ th term
$=\frac{(11+1)}{2}$ th term
$=$ value of the 6th term
$=16$
Therefore, median $=16$
(iv) Arranging the data in ascending order, we have

0, 1, 2, 2, 3, 4, 4, 5, 5, 7, 8, 9, 10
Here $n=13$, which is odd

$$
\begin{aligned}
\text { median } & =\frac{1}{2}(n+1) \text { th term } \\
& =\frac{(13+1)}{2} \text { th term } \\
& =\text { value of the } 7 \text { th term } \\
& =4 \\
\therefore \text { median } & =4
\end{aligned}
$$

Question 2:
(i) Arranging the data in ascending order, we have

9, 10, 17, 19, 21, 22, 32, 35
Here $\mathrm{n}=8$, which is even

$$
\begin{aligned}
\text { median } & =\frac{1}{2}\left[\left[\left(\frac{\mathrm{n}}{2}\right)\right] \text { th term }+\left(\frac{\mathrm{n}}{2}+1\right) \text { th term }\right] \\
& =\frac{(1)}{2}[(4 \text { th term }+5 \text { th term })][\because \mathrm{n}=8] \\
& =\frac{1}{2}(19+21) \\
& =\left(\frac{1}{2} \times 40\right)=20
\end{aligned}
$$

$\therefore$ median $=20$
(ii) Arranging the data in ascending order, we have
$29,35,51,55,60,63,72,82,85,91$
Here $n=10$, which is even

## Downloaded from www.studiestoday.com S Aggarwal Class 9 Mathematics Solutior

$$
\begin{aligned}
\therefore \text { median } & =\frac{1}{2}\left[\left[\left(\frac{\mathrm{n}}{2}\right)\right] \text { thterm }+\left(\frac{\mathrm{n}}{2}+1\right) \text { th term }\right] \\
& =\frac{1}{2}[(5 \text { th term }+6 \text { th term })][\because \mathrm{n}=10] \\
& =\frac{1}{2}(60+63) \\
& =\left(\frac{1}{2} \times 123\right)=61.5
\end{aligned}
$$

$\therefore$ median $=61.5$
(iii) Arranging the data in ascending order, we have
$3,4,9,10,12,15,17,27,47,48,75,81$ Here $n=12$, which is even

$$
\begin{aligned}
\text { median } & =\frac{1}{2}\left[\left[\left(\frac{\mathrm{n}}{2}\right)\right] \text { thterm }+\left(\frac{\mathrm{n}}{2}+1\right) \text { th term }\right] \\
& =\frac{1}{2}[(6 \text { th term }+7 \text { th term })][\because \mathrm{n}=12] \\
& =\frac{1}{2}(15+17) \\
& =\left(\frac{1}{2} \times 32\right)=16
\end{aligned}
$$

$\therefore$ median=16

## Question 3:

Arranging the data in ascending order, we have

$$
17,17,19,19,20,21,22,23,24,25,26,29,31,35,40
$$

Here $\mathrm{n}=15$, which is odd

$$
\begin{aligned}
\text { Median } & =\frac{1}{2}(\mathrm{n}+1) \text { th term } \\
& =\frac{1}{2}(15+1) \text { th term } \\
& =\text { value of } 8 \text { th term } \\
& =23 \\
\text { Median } & =23
\end{aligned}
$$

Thus, the median score is 23 .

## Question 4:

Arranging the heights of 9 girls in ascending order, we have
143.7, 144.2, 145, 146.5, 147.3, 148.5, 149.6, 150, 152.1

Here $n=9$, which is odd
$\therefore$ median $=\frac{1}{2}(\mathrm{n}+1)$ th term
$=\frac{(9+1)}{2}$ th term
$=$ value of 5 th term
$=147.3$
$\therefore$ median height $=147.3 \mathrm{~cm}$

Question 5:
Arranging the weights of 8 children in ascending order, we have

Here , $\mathrm{n}=8$, which is even

## Downloaded from www.studiestoday.com S Aggarwal Class 9 Mathematics Solutior

$$
\begin{aligned}
\therefore \text { median } & =\frac{1}{2}\left[\left[\left(\frac{\mathrm{n}}{2}\right)\right] \text { thterm }+\left(\frac{\mathrm{n}}{2}+1\right) \text { th term }\right] \\
& =\frac{1}{2}[(4 \text { th term }+5 \text { th term })][\because \mathrm{n}=8] \\
& =\frac{1}{2}(13.4+14.3) \\
& =\left(\frac{1}{2} \times 27.7\right)=13.85
\end{aligned}
$$

$\therefore \quad$ median weight $=13.85 \mathrm{~kg}$

Question 6:
Arranging the ages of teachers in ascending order, we have
$32,34,36,37,40,44,47,50,53,54$
Here, $n=10$, which is even

$$
\begin{aligned}
\therefore \text { median } & =\frac{1}{2}\left[\left[\left(\frac{\mathrm{n}}{2}\right)\right] \text { thterm }+\left(\frac{\mathrm{n}}{2}+1\right) \text { th term }\right] \\
& =\frac{1}{2}[(5 \text { th term }+6 \text { th term })][\because \mathrm{n}=10] \\
& =\frac{1}{2}(40+44) \\
& =\left(\frac{1}{2} \times 84\right)=42
\end{aligned}
$$

. median age $=42$ years

Question 7:
The ten observations in ascending order:
$10,13,15,18, x+1, x+3,30,32,35,41$
Here, $n=10$, which is even

$$
\begin{aligned}
& \therefore \text { median }=\frac{1}{2}\left[\left(\frac{\mathrm{n}}{2}\right) \text { thterm }+\left(\frac{\mathrm{n}}{2}+1\right) \text { th term }\right] \\
& \\
& =\frac{1}{2}[(5 \text { th term }+6 \text { th term })][\because \mathrm{n}=10] \\
& =\frac{1}{2}(x+1+\mathrm{x}+3) \\
& =\frac{1}{2}(2 x+4) \\
& =x+2 \\
& \therefore \quad \text { median }=x+2 \\
& \text { But median }=24 \text { (given) } \\
& \begin{array}{rl}
\therefore \quad x+2 & =24 \\
\Rightarrow \quad x & =24-2 \\
\therefore \quad x & x
\end{array}
\end{aligned}
$$

Question 8:

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

Let us now prepare the cumulative frequency table.

| Weight (in kg) | No. of students | Cumulative frequency |
| :--- | :--- | :--- |
| 45 | 8 | 8 |
| 46 | 5 | 13 |
| 48 | 6 | 19 |
| 50 | 9 | 28 |
| 52 | 7 | 35 |
| 54 | 4 | 39 |
| 55 | 2 | 41 |

Total $n=41$, which is odd

$$
\begin{aligned}
\text { median weight } & =\left(\frac{\mathrm{n}+1}{2}\right) \text { th term } \\
& =\left(\frac{41+1}{2}\right) \text { th term } \\
& =\text { value of } 21 \text { st term }
\end{aligned}
$$

$\therefore$ median weight $=$ weight of the $21^{\text {st }}$ student
But the above table shows that each one of the students from $20^{\text {th }}$ to $28^{\text {th }}$ has 50 kg as his weight.
$\therefore$ the weight of the 21 st student will be 50 kg .
Hence median weight $=50 \mathrm{~kg}$.

Question 9:
Arrange the terms in an ascending order, we have

| Variate | 15 | 17 | 20 | 22 | 25 | 30 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 3 | 5 | 9 | 4 | 6 | 10 |

Now preparing the cumulative frequency, we have

| Variate | Frequency | Cumulative Frequency |
| :---: | :---: | :---: |
| 15 | 3 | 3 |
| 17 | 5 | 8 |
| 20 | 9 | 21 |
| 22 | 4 | 27 |
| 20 | 10 | 37 |
|  |  |  |
| 20 |  |  |

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

Here $\mathrm{n}=37$, which is odd

$$
\begin{aligned}
\therefore \text { median } & =\left(\frac{\mathrm{n}+1}{2}\right) \text { th term } \\
& =\left(\frac{37+1}{2}\right) \text { th term } \\
& =19 \text { th term }
\end{aligned}
$$

$$
=\text { frequency of the } 19^{\text {th }} \text { variate }
$$

But the above table shows that the frequency of variates from $18^{\text {th }}$ term to $21^{\text {st }}$ term is 22
So the frequency of $19^{\text {th }}$ term will be 22
$\therefore$ Median $=22$

Question 10:
Arrange the terms in an ascending order, we have

| Marks | 9 | 20 | 25 | 40 | 50 | 80 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of students | 4 | 6 | 16 | 8 | 7 | 2 |

Now preparing the cumulative frequency, we have

| Marks | No of students(Frequency) | Cumulative Frequency |
| :---: | :---: | :---: |
| 9 | 4 | 4 |
| 20 | 6 | 10 |
| 25 | 16 | 26 |
| 40 | 7 | 34 |
| 80 | 2 | 43 |
| 80 |  |  |

Here, number of students $=43$, which is odd

$$
\begin{aligned}
\text { median } & =\left(\frac{n+1}{2}\right) \text { nd term } \\
& =\left(\frac{43+1}{2}\right) \text { nd term } \\
& =22 \text { nd term } \\
& =\text { marks of } 22^{\text {nd }} \text { student }
\end{aligned}
$$

But the above table shows that each one of the students from $11^{\text {th }}$ to $26^{\text {th }}$ gets 25 marks.
So the $22^{\text {nd }}$ student gets 25 marks
$\therefore$ median of marks $=25$

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

Question 11:
Arranging the terms in an ascending order, we have

| Height(in cm) | 151 | 152 | 153 | 154 | 155 | 156 | 157 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of students | 6 | 3 | 12 | 4 | 10 | 8 | 7 |

Now preparing the cumulative frequency, we have

| Height (in cm) | No of students Frequency | Cumulative Frequency |
| :---: | :---: | :---: |
| 151 | 6 | 6 |
| 152 | 3 | 9 |
| 153 | 12 | 21 |
| 154 | 4 | 25 |
| 155 | 10 | 35 |
| 156 | 8 | 43 |
| 157 | 7 | 50 |

Here, $\mathrm{n}=50$, which is even

$$
\begin{aligned}
\text { median } & =\frac{1}{2}\left[\left[\left(\frac{\mathrm{n}}{2}\right)\right] \text { thterm }+\left(\frac{\mathrm{n}}{2}+1\right) \text { th term }\right] \\
& =\frac{1}{2}[(25 \text { th term }+26 \text { th term })][\because \mathrm{n}=50] \\
& =\left(\frac{154+155}{2}\right) \\
& =\frac{309}{2} \\
& =154.5
\end{aligned}
$$

$\therefore$ median height $=154.5 \mathrm{~cm}$

## Question 12:

Arrange the terms in an ascending order, we have

| Variate | 16 | 18 | 20 | 23 | 25 | 26 | 28 | 30 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 9 | 8 | 13 | 4 | 4 | 6 | 11 | 5 |

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

Now preparing the cumulative frequency, we have

| Variate | Frequency | Cumulative Frequency |
| :---: | :---: | :---: |
| 16 | 9 | 9 |
| 18 | 8 | 17 |
| 20 | 13 | 30 |
| 23 | 4 | 34 |
| 25 | 4 | 38 |
| 26 | 6 | 44 |
| 28 | 11 | 55 |
| 30 | 5 | 60 |

Here, $\mathrm{n}=60$, which is even.

$$
\begin{aligned}
\therefore \text { median } & =\frac{1}{2}\left[\left(\frac{n}{2}\right) \text { th term }+\left(\frac{n}{2}+1\right) \text { th term }\right] \\
& =\frac{1}{2}[(30 \text { th term }+31 \text { th term })][\because \mathrm{n}=60] \\
& =\frac{1}{2}(20+23) \\
& =\left(\frac{1}{2} \times 43\right) \\
& =21.5 \\
\therefore \text { median } & =21.5
\end{aligned}
$$

Exercise 14H
Question 1:
Arrange the given data in ascending order we have
$0,0,1,2,3,4,5,5,6,6,6,6$
Let us prepare the following table:

| Observations(x) | 0 | 1 | 2 | 3 | 4 | 5 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 2 | 1 | 1 | 1 | 1 | 2 | 4 |

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

Arranging the given data in ascending order , we have:
$15,20,22,23,25,25,25,27,40$
The frequency table of the data is :

| Observations(x) | 15 | 20 | 22 | 23 | 25 | 27 | 40 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 1 | 1 | 1 | 1 | 3 | 1 | 1 |

As 25 ocurs the maximum number of times i.e. 3, mode $=25$

Question 3:
Arranging the given data in ascending order, we have:
1, 1, 2, 3, 3, 4, 5, 5, 6, 6, 7, 8, 9, 9, 9, 9, 9,
The frequency table of the data is :

| Observations(x) | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 2 | 1 | 2 | 1 | 2 | 2 | 1 | 1 | 5 |

As 9 , occurs the maximum number of times i.e. 5 , mode $=9$

Question 4:
Arranging the given data in ascending order, we have:
$9,19,27,28,30,32,35,50,50,50,50,60$
The frequency table of the data is :

| Observations(x) | 9 | 19 | 27 | 28 | 30 | 32 | 35 | 50 | 60 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 4 | 1 |

As 50, ocurs the maximum number of times i.e. 4 , mode $=50$
Thus, the modal score of the cricket player is 50 .

Question 5:
Arranging the given data in ascending order, we have:
10, 10, 11, 11, 12, 12, 13, 14, 15, 17
We may prepare the table, given below:

| $\operatorname{Item}(\mathrm{x})$ | Frequency(f) | Cumulative Frequency | fx |
| :---: | :---: | :---: | :---: |
| 10 | 2 | 2 | 20 |

Jownloaded from www.studiestoday.com
S Aggarwal Class 9 Mathematics Solutior

| 11 | 2 | 4 | 22 |
| :---: | :---: | :---: | :---: |
| 12 | 2 | 6 | 24 |
| 14 | 1 | 7 | 13 |
| 15 | 1 | 8 | 14 |
| 17 | 1 | 10 | 15 |
| $N=10$ |  |  | 17 |

$$
\begin{aligned}
& \text { Here, } \mathrm{N}=10 \text { which is even } \\
& \begin{aligned}
\therefore \text { median } & =\frac{1}{2}\left[\left[\left(\frac{\mathrm{n}}{2}\right)\right] \text { th term }+\left(\frac{\mathrm{n}}{2}+1\right) \text { th term }\right] \\
& =\frac{1}{2}[(5 \text { th term }+6 \text { th term })][\because \mathrm{n}=10] \\
& =\frac{1}{2}(12+12) \\
& =12
\end{aligned} \\
& \text { Now, } \begin{aligned}
\sum \mathrm{f} & \times \mathrm{x}=125 \text { and } \mathrm{f}=10
\end{aligned} \\
& \begin{aligned}
\therefore \quad \text { mean } & =\frac{\sum \mathrm{f} \times \mathrm{x}}{\sum \mathrm{f}}=\frac{125}{10}=12.5
\end{aligned} \\
& \text { Mode }=3(\text { Median })-2(\text { Mean }) \\
& \quad=3(12)-2(12.5) \\
& \\
& \text { Thus, Mode }=36-25=11
\end{aligned}
$$

Question 6:

Downloaded from www.studiestoday.com
S Aggarwal Class 9 Mathematics Solutior
We may prepare the table, given below:

| Marks $(\mathrm{x})$ | No of students <br> (f) | Cumulative Frequency |
| :--- | :--- | :--- | :--- | $\mathrm{f} \mathrm{\times x}$|  |
| :--- |
| 10 |

$$
\begin{aligned}
\text { Here, } \mathrm{N} & =25 \text { which is odd } \\
\therefore \text { median } & =\left(\frac{\mathrm{N}+1}{2}\right) \text { th term } \\
& =\left(\frac{25+1}{2}\right) \text { th term } \\
& =\text { value of the } 13 \text { th term } \\
& =13
\end{aligned}
$$

Now, $\sum f \times x=332$ and $\sum f=25$
$\therefore \quad$ mean $=\frac{\sum f \times x}{\sum f}=\frac{332}{25}=13.28$
Mode $=3($ median $)-2($ mean $)$
$=(3 \times 13)-(2 \times 13.28)$
$=39-26.56$
$=12.44$
Thus mode $=12.4$

Question 7:

Downloaded from www.studiestoday.com
S Aggarwal Class 9 Mathematics Solutior
We may prepare the table, given below:

| Item(x) | Frequency(f) | Cumulative <br> Frequency | $\mathrm{f} \times \mathrm{x}$ |
| :--- | :--- | :--- | :--- |
| 5 | 6 | 6 | 30 |
| 7 | 5 | 11 | 35 |
| 9 | 3 | 14 | 27 |
| 12 | 6 | 20 | 72 |
| 14 | 5 | 25 | 70 |
| 17 | 3 | 28 | 51 |
| 19 | 2 | 30 | 38 |
| 21 | 4 | 34 | 84 |
|  | $\mathrm{~N}=\sum \mathrm{f}=34$ |  | $\sum \mathrm{fxx}=407$ |

Here, $N=34$, which is even.

$$
\begin{aligned}
\text { Median } & =\frac{1}{2}\left[\left[\left(\frac{\mathrm{n}}{2}\right)\right] \text { thterm }+\left(\frac{\mathrm{n}}{2}+1\right) \text { th term }\right] \\
& =\frac{1}{2}[(17 \text { th term }+18 \text { th term })][\because \mathrm{n}=34] \\
& =\frac{1}{2}(12+12)=\left(\frac{1}{2} \times 24\right)=12
\end{aligned}
$$

Now, $\sum f \times x=407$ and $\sum f=34$
$\therefore \quad$ mean $=\frac{\sum f \times x}{\sum f}=\frac{407}{34}=11.97$
Mode $=3$ (median) -2 (mean)
$=(3 \times 12)-(2 \times 11.97)$
$=36-23.94$
$=12.06$
Thus, mode $=12.06$

Question 8:

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

We may prepare the table, given below:

| $(\mathrm{x})$ | Frequency(f) | Cumulative <br> Frequency | $\mathrm{f} \times \mathrm{x}$ |
| :--- | :--- | :--- | :--- |
| 18 | 6 | 6 | 108 |
| 20 | 7 | 13 | 140 |
| 25 | 3 | 16 | 75 |
| 30 | 7 | 23 | 210 |
| 34 | 7 | 30 | 238 |
| 38 | 5 | 35 | 190 |
| 40 | 5 | 40 | 200 |
|  | $\sum \mathrm{f}=40$ |  | $\sum \mathrm{f} \times \mathrm{x}=1161$ |

Here, $N=40$, which is even.

$$
\begin{aligned}
\text { Median } & =\frac{1}{2}\left[\left[\left(\frac{n}{2}\right)\right] \text { th term }+\left(\frac{\mathrm{n}}{2}+1\right) \text { th term }\right] \\
& =\frac{1}{2}[(20 \text { th term }+21 \text { st term })][\because \mathrm{n}=40] \\
& =\frac{1}{2}(30+30)=\left(\frac{1}{2} \times 60\right)=30
\end{aligned}
$$

Now, $\sum f \times x=1161$ and $\sum f=40$
$\therefore \quad$ mean $=\frac{\sum \mathrm{f} \times \mathrm{x}}{\sum \mathrm{f}}=\frac{1161}{40}=29.025$
Mode $=3$ (median) -2 (mean)

$$
\begin{aligned}
& =(3 \times 30)-(2 \times 29.025) \\
& =(90-58.05)=31.95 .
\end{aligned}
$$

Thus, mode $=32$.

Question 9:
We may prepare the table, given below:

| Weight (in <br> kg ) | No of <br> persons(f) | Cumulative <br> Frequency | $\mathrm{f} \times \mathrm{x}$ |
| :--- | :--- | :--- | :--- |
| 42 | 3 | 3 | 126 |
| 47 | 8 | 11 | 376 |
| 52 | 6 | 17 | 312 |
| 57 | 8 | 25 | 456 |
| 62 | 11 | 36 | 682 |
| 67 | 5 | 41 | 335 |
| 72 | 9 | 50 | 648 |
|  | $\sum \mathrm{f}=\mathrm{N}=50$ |  | $\sum \mathrm{f} \times \mathrm{x}=2935$ |

## Downloaded from www.studiestoday.con S Aggarwal Class 9 Mathematics Solutio

Here, $\sum \mathrm{f} \times \mathrm{x}=2935$, and $\sum \mathrm{f}=50$
mean $=\frac{\sum f \times x}{\sum f}=\frac{2935}{50}=58.7$
$\therefore$ mean weight $=58.7 \mathrm{~kg}$
Here, $N=50$ which is even.
$\therefore$ median $=\frac{1}{2}\left[\left[\left(\frac{n}{2}\right)\right]\right.$ th term $+\left(\frac{n}{2}+1\right)$ th term $]$
$=\frac{1}{2}[(25$ th term +26 th term $)][\because \mathrm{n}=50]$
$=\frac{1}{2}(57+62)$
$=\left(\frac{1}{2} \times 119\right)=59.5$
$\therefore$ median weight $=59.5 \mathrm{~kg}$
We know that,
mode $=3$ (median) $-2($ mean $)$

$$
=(3 \times 59.5)-2(58.7)
$$

$$
=178.5-117.4=61.1
$$

mode weight $=61.1 \mathrm{~kg}$
Thus we have,
mean $=58.7 \mathrm{~kg}$, median $=59.5 \mathrm{~kg}$
and mode $=61.1 \mathrm{kq}$

## Question 10:

We may prepare the table, given below:

| Marks (x) | No of <br> students <br> $(f)$ | Cumulative <br> Frequency | $\mathrm{f} \times \mathrm{x}$ |
| :--- | :--- | :--- | :--- |
| 4 | 8 | 8 | 32 |
| 12 | 10 | 18 | 120 |
| 20 | 16 | 34 | 320 |
| 28 | 24 | 58 | 672 |
| 36 | 15 | 73 | 540 |
| 44 | 7 | 80 | 308 |
|  | $\sum \mathrm{f}=\mathrm{N}=80$ |  | $\sum \mathrm{fxx}=1992$ |

Here, $n=80$, which is even.

$$
\begin{aligned}
\therefore \text { median } & =\frac{1}{2}\left[\left[\left(\frac{\mathrm{n}}{2}\right)\right] \text { thterm }+\left(\frac{\mathrm{n}}{2}+1\right) \text { th term }\right] \\
& =\frac{1}{2}[(40 \text { th term }+41 \text { st term })][\because \mathrm{n}=80] \\
& =\frac{1}{2}(28+28) \\
& =\left(\frac{1}{2} \times 56\right)=28
\end{aligned}
$$

Now, $\sum \mathrm{f} \times \mathrm{x}=1992$ and $\sum \mathrm{f}=80$
$\therefore$ mean $=\frac{\sum \mathrm{f} \times \mathrm{x}}{\sum \mathrm{f}}=\frac{1992}{80}=24.9$
$\therefore \quad$ mode $=3$ (median $)-2$ (mean)

$$
\begin{aligned}
& =(3 \times 28)-(2 \times 24.9) \\
& =84-49.8=34.2
\end{aligned}
$$

$\therefore$ modal marks $=34.2$

Downloaded from www.studiestoday.com
S Aggarwal Class 9 Mathematics Solution
We may prepare the table, given below:

| Age (in years) <br> $(\mathrm{x})$ | No. of <br> persons <br> $(\mathrm{f})$ | Cumulative <br> Frequency | $\mathrm{f} \mathrm{\times x}$ |
| :--- | :--- | :--- | :--- |$|$| 19 | 13 | 13 | 247 |
| :--- | :--- | :--- | :--- |
| 21 | 15 | 28 | 315 |
| 23 | 16 | 44 | 368 |
| 25 | 18 | 62 | 450 |
| 27 | 16 | 78 | 432 |
| 29 | 15 | 93 | 435 |
| 31 | 13 | 106 | 403 |
|  | $\sum \mathrm{f}=\mathrm{N}=106$ |  | $\sum \mathrm{fxx}=2650$ |

Here, $\sum f \times x=2650$, and $\sum f=106$
mean $=\frac{\sum f \times x}{\sum f}=\frac{2650}{106}=25$
$\therefore$ mean $=25$
Here, $N=106$ which is even

$$
\begin{aligned}
& \therefore \text { median }=\frac{1}{2}\left[\left(\frac{n}{2}\right) \text { th term }+\left(\frac{\mathrm{n}}{2}+1\right) \text { th term }\right] \\
&=\frac{1}{2}[(53 \text { th term }+54 \text { th term })][\because \mathrm{n}=106] \\
&=\frac{1}{2}(25+25) \\
&=\left(\frac{1}{2} \times 50\right)=25 \\
& \begin{aligned}
\therefore \text { median } & =25 \\
\therefore \text { mode } & =3 \text { (median })-2 \text { (mean }) \\
& =(3 \times 25)-(2 \times 25) \\
& =75-50=25
\end{aligned}
\end{aligned}
$$

Thus, mean $=25$, median $=25$ and mode $=25$

Question 12:

Downloaded from www.studiestoday.com
S Aggarwal Class 9 Mathematics Solution
We may prepare the table, given below:

| Weight (in <br> $\mathrm{kg})$ <br> $(\mathrm{x})$ | No of <br> students <br> (f) | Cumulative <br> Frequency | $\mathrm{f} \times \mathrm{x}$ |
| :--- | :--- | :--- | :--- |
| 47 | 4 | 4 | 188 |
| 50 | 3 | 7 | 150 |
| 53 | 2 | 9 | 106 |
| 56 | 2 | 11 | 112 |
| 60 | 4 | 15 | 240 |
|  | $\sum \mathrm{f}=\mathrm{N}=15$ |  | $\sum \mathrm{fxx}=796$ |

Here, $\sum f \times x=796$, and $\sum f=15$
$\therefore \quad$ mean $=\frac{\sum f \times x}{\sum f}=\frac{796}{15}=53.06$
$\therefore \quad$ mean $=53.06$

Here, $\mathrm{N}=15$ which is odd

$$
\begin{aligned}
\therefore \quad \text { median } & =\left(\frac{\mathrm{n}+1}{2}\right) \text { th term } \\
& =\left(\frac{15+1}{2}\right) \text { th term }=8 \text { th term }
\end{aligned}
$$

value of the 8 th term $=53$
$\therefore$ median $=53$
$\therefore \quad$ mode $=3$ (median) -2 (mean)

$$
=(3 \times 53)-(2 \times 53.06)
$$

$$
=159-106.12=52.88
$$

Thus, mean $=53.06$, median $=53$ and mode $=52.88$

[^0]:    Here,
    $\sum \mathrm{f}_{\mathrm{i}}=68+\mathrm{f}_{1}+\mathrm{f}_{2}$
    But $68+\mathrm{f}_{1}+\mathrm{f}_{2}=120$ (Given)
    Therefore,
    $68+f_{1}+f_{2}=120$
    $\Rightarrow f_{1}+f_{2}=120-68=52$
    Thus, $f_{2}=52-f_{1} \ldots \ldots$. (1)
    Also,
